

United Kingdom

SEPTEMBER 2026

Which refrigerant is actually listed?

Five markets, one snapshot — and a share that appears in no sales statistic.

HEATPUMPDB.UK

The refrigerant transition has been discussed for years. What is actually registered in the national catalogues is rarely shown.

- The share in each market
- What R290 means in practice
- What these numbers are not

Refrigerants in the catalogue by market

Share of the models that declare a refrigerant.

Share of registered models

MARKET	R290	R32	R454x	R410A
Germany	36%	38%	9%	13%
United Kingdom	36%	38%	9%	13%
France	37%	39%	9%	13%
Poland	32%	43%	7%	14%
Italy	35%	41%	9%	12%

Basis: models in each market’s own catalogue, snapshot 2026-09-01, that declare a refrigerant — not sales or installation figures. Assigned by substring (R290, R32, R454x, R410A); the remainder to 100% is other refrigerants. In Italy 73% of listed models declare one, in the other markets nearly all.

What it means

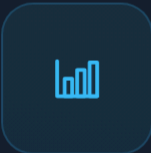

Propane is an A3 refrigerant — which moves the requirement from the machine to the operation.

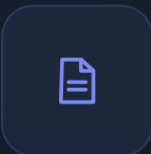

About a third is already R290

A3: flammable, certified handling in service

R32 is still the largest single group

38–43% depending on the market

R410A has not gone away

12–14% of the listed models
